Project Finance

8R-PF PROGRAM

EIGHTER 7+1 Program (8R-P) is a unique software for assessment of **7**-factors and their impact over **1**—operational risk factor, practicing by the borrower's managing body. Its development began by Prof. George Angelow, President and CEO of International Investment Council (IIC) Washington, DC, when the financial crisis in 2008 began with AAA+ valuation of Lehman Brothers and its collapse on the next day after it with bankruptcy. It clearly shows an increase of the inadequacy of the long-time used software for financial risk assessment.

The purpose of risk analysis is to quantify uncertainty with regard to factors influencing the results of the acceptance of an investment decision. To use the results both for financing the project and subsequently for its management, there is **Online Cash Flow Control System**. Monthly accounting data reports are entered automatically into the IIC's server where the predictable and unpredictable events of interest are treated primarily by the [Bayes Theorem](#) algorithm.

Finally, for a real, adequate result, the **8R-P** algorithm requires the assessment to be made by three groups—**INSIDE EXPERTISE** by trained project company's employees, **EXTERNAL ASSESSORS**—by experts of the outsourcing company (for Europe and Asia) **East Electric Company, Ltd.**, Bulgaria, and **INDEPENDENT EVALUATION** by professional group. In case the specialized expertise confirms high level of risk, but operational management of the project largely depends on the personal quality of the operational decision maker this is subject of application of [biometric identification](#) with assessment of his (manager's) **PERSONALITY TRAITS**, evaluated in a new matrix of **8R-P**, represented by new graphic interpretation*.
